QUICK START GUIDE
1 CAREFULLY UNPACK ALL THE ITEMS AND RETAIN THE PACKAGING FOR LATER USE

- 1 x F1-10G-BP main unit
- 2 x 12V 1.5A power supply
- 1 x DB9 to RJ45 console cable

2 CONNECT THE MONITORING PORTS

A Carefully insert both DAC/SFP modules in to TAP A and TAP B ports, making sure the retention mechanism is closed. Depending on the SFP module used, attach the optical fiber or the Ethernet cables and assure a proper connection.

▶ **Note:** Optical fiber connectors should be inspected for debris that might affect the link.

B Follow the same procedure when connecting to the monitored security appliance, and make sure the signal direction matches the Tx ▶ Rx / Tx ▶ Rx signal direction in case of using optical fiber cables.

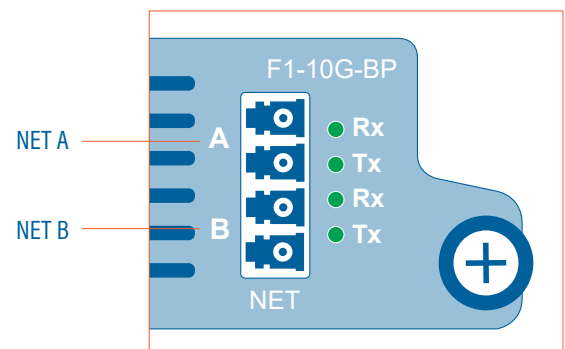

3 CONNECT THE IN-LINE NETWORK PORTS

**A** Insert the LC optical fiber cables in to the NET A and NET B ports and assure a proper connection.

▶ **Note:** Optical fiber connectors should be inspected for debris that might affect the link.

B Follow the same procedure when connecting the optical fiber cables to the network devices, matching the Tx ▶ Rx / Tx ▶ Rx signal direction.

4 CONNECT THE MANAGEMENT PORTS

A Connect the Ethernet management port to the LAN.

B Optional: connect the Serial management port to the computer.

ETHERNET MANAGEMENT PORT

SERIAL MANAGEMENT PORT
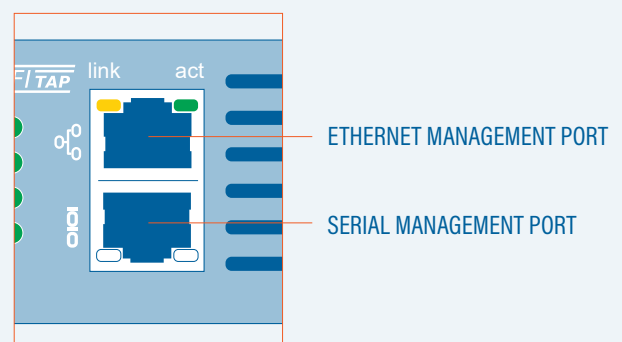

5 POWER UP

A Connect at least one power supply for the device to power up.

B Connect the secondary power supply to achieve a maximum failsafe operation at any time.

POWER CONNECTORS
6 CONNECT TO THE DEVICE, CONFIGURE AND START MONITORING

A Remotely, through LAN, using SSH or the BP Manager web interface.

B Locally, using the serial cable, in CLI mode.

C Configure the Bypass and Heartbeat behavior and the rest of its settings.

D Start monitoring the traffic.
