

# 40/100G BiDi TAPs

Providing Visibility To Cisco Bidirectional Links

The Profitap 40/100G BiDi fiber optic TAPs were specifically designed for the monitoring of Cisco bidirectional links.

The Cisco bidirectional standard uses two parallel multi-mode fiber strands to transmit the signal, rendering standard tapping systems inadequate for the monitoring of such links. The Profitap 40/100G BiDi fiber optic TAP transmits traffic to monitoring tools from all fiber optic signals, enabling total visibility over your network.

For complete security and optimum performance, the 40/100G BiDi TAPs are fully passive, requiring no power for operation. They are available with OM4 and OM5 fiber optic cabling, in single and triple density (up to 9 TAP points in a 1U footprint), and use low insertion loss zirconia sleeve adapters.

## Application

- Cisco Application Centric Infrastructure
- Cisco systems using 40G and 100G transceivers
- Cost-efficient upgrade to 40G and 100G

## Features

- Non-intrusive in-line monitoring
- Permanent network link guaranteed
- Monitoring of all OSI layers
- No packet loss, no point of failure
- Passive, unpowered
- 40G and 100G dual-rate capability
- Backward compatibility with 40G BiDi
- 10-year warranty

## Maximum insertion loss (dB)

40/100G BiDi (OM4 MM 50µm)	NET / TAP: 3.8 / 3.8
40/100G BiDi (OM5 MM 50µm)	NET / TAP: 3.8 / 3.8

Note: These values don't include external connector loss.
